

Guideline when asking in the Community

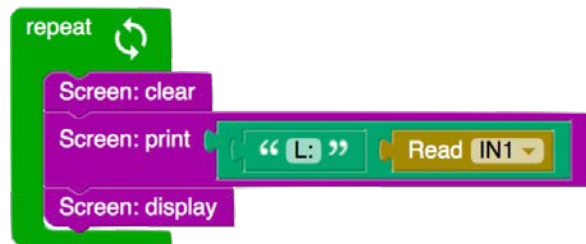

1. Describe your project and your goal. What do you want to achieve? Describe what you **expected** to happen, and what **actually** happened.

2. A picture of your setup. Show us your connection.

3. A picture of your code, so we can help check if there is a bug.

4. Narrow down the problem. Help us locate the problem. Is it hardware or software? Is it inside a specific loop? If you had tried to debug / trouble shoot, show us what you have done and what the feedback is.

5. Make sure you first check the online available information!
